

BlackTop Tour Bag Mounting Instructions

Thank you for buying the Sweetwater “BlackTop” tour bag. Please follow the mounting instructions below for maximum performance of your bag. This bag is designed to fit the HD premium luggage rack.

The 2 strap system makes this pack a snap to attach to your luggage rack.

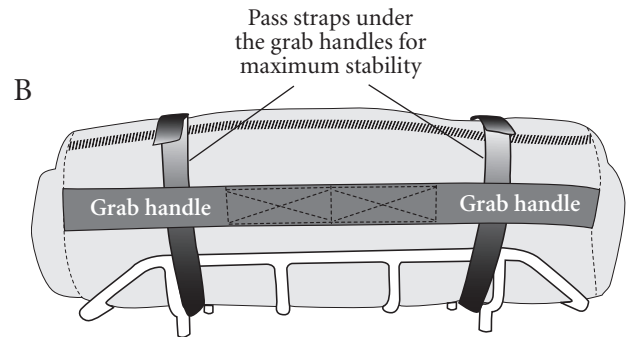

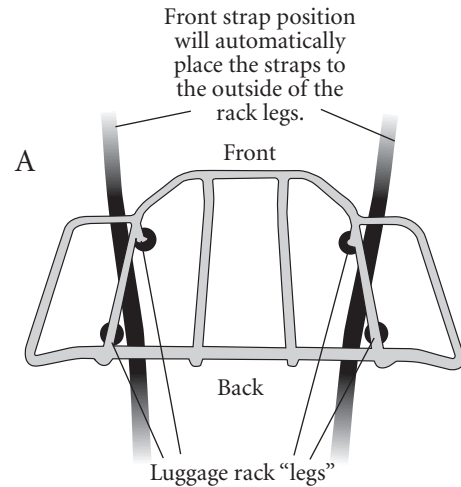

Always remove the Blacktop bag before opening your tour pack lid to a fully open position. The extra added weight of the tourpack could cause damage to your rack support system and/or your tour pak lid & hinges.

1. Center bag on rack.
2. Crisscross the straps to either side of the rack mounting legs. See illustration A.
3. Straps in the front should automatically fall to the outside of the front rack legs. You may find it easier to slightly lift the rear of the bag, guide either strap to the inside of each of the rear rack legs. See illustration A.
4. Bring the straps up and over the outside of the back rail of the luggage rack. See illustration B.
5. For maximum security, bring the straps up and over the back rail of the luggage rack, pass them “under” the grab handle of the pack. See illustration B.
6. Connect buckle ends, adjust strap until all of the slack is out of the straps and the bag is compressed firmly to the rack.

Note: When adjusting compressions straps, lifting the end of the buckle(s) while pulling the strap tight will allow the strap to pass through the buckle smoothly.

Maximum recommended load is 10 lbs.

STORING YOUR BLACKTOP BAG: When/if folding the Blacktop bag for storing or stashing into your trunk or saddlebag, take caution not to “kink” the zippers by forcing a tight fold. Folding and forced compression at the point of the fold may stretch the zipper base and eventually cause the zipper to fail to function properly.

Failure to follow instructions could result in product failure and/or damage to your motorcycle. For questions or more information on Sweetwater Motorcycle Gear products, please visit www.sweetwatermotorcyclegear.com.
